Salary and PF Details - Manual

This is the Employee Details Sheet, where employee data is maintained manually. The data cannot be fetched from Zoho because details related to PF and the monthly fixed salary are not available in Zoho.

Entities	Employee ID	Employee Name	Monthly Fixed	PF	DOJ	Exit Date
----------	-------------	---------------	---------------	----	-----	-----------

Data Fetching Directly From Zoho

Attendance record-Zoho

The sheet will directly fetch attendance data for this aman has used 4 API's separately. It will be sorted as per the Employee ID, so any new employee who joins will automatically be added at the bottom of the list. It also ensures that inactive employees' data is included.

Problems:

1. When an employee **resigned or was terminated**, they were marked as inactive in Zoho. Their attendance data for the month in which they had worked was not being fetched from Zoho. As a result, their details were missing from that month's salary sheet.
2. In some cases, the same attendance column was showing multiple statuses together, such as **OD/P or CL/P**. Due to this, the data reflects as "-" because an employee cannot be marked both Present and on Leave at the same time.
3. There were chances that an employee could be missed in the **Salary and PF Details Sheet** but be present in the **attendance record sheet and vice versa**.

Solution:

1. To resolve this issue, an additional API was created. This ensures that if an employee has worked during a particular month, their attendance data is still fetched from Zoho and reflected in the salary sheet, even if the employee is no longer active or Inactive.
2. To avoid confusion in attendance status, Aman implemented specific APIs to fetch Leave, OD and related data exactly as it appears in Zoho instead of showing only "-". This ensures statuses are displayed in the same format, such as **OD/CL, WO/CL**, etc. However, in the **Salary Sheet**, such entries will be **highlighted in red** in the **"Expected Worked Day(s)" column** for easier identification and verification.
3. In case an employee is **missed** in the Salary and PF Details Sheet, the **Employee Name and Employee Code** will now be highlighted in **red** for easy identification and correction.

Reimbursement - Zoho

In the Reimbursement section, the data is automatically fetched **from Zoho** based on the **Date of Payment**. The payment date must fall within the same month for which the salary is being processed, and it is linked with the attendance record for date and month reference. Also, you can directly see the Image or bill receipt [here](#).

Problem:

1. Since the data is being collected through a **Zoho Form**, it was challenging to establish the appropriate basis for processing reimbursements, particularly in relation to the relevant salary month, as salary months will keep changing.
2. There is a possibility of **duplicate reimbursement submissions** in cases where an employee unintentionally applies for the same reimbursement more than once.
3. As the reimbursement data needed to be shared with Vishal for verification purposes, I had to **separately** download and share both the **reimbursement payment images and bill receipts**, since he does not have admin access to view the reimbursement proofs directly in the system.
4. As the reimbursement process is fully automated, there may be cases where some employee **forget to apply** for reimbursement or unintentionally skip the submission process within that particular month.

Employees are requested to submit reimbursement bills only within the same month in which the payment was made (based on the Date of Payment). In case of a missed or exceptional situation, employees must first inform us and take permission from the reporting manager and 2nd manager via email. Before applying for the reimbursement in Zoho.

Solution:

1. To address this, we implemented a logic whereby the data is fetched only when the Month of Payment (i.e., the **Date of Payment** field) matches the month for which the **salary sheet is being prepared**. This ensures that only the relevant reimbursement entries for the respective month are considered. Additionally, the reimbursement data is linked with the attendance sheet to maintain accuracy and consistency in salary processing.
2. To resolve the **duplicate** data issue, the system will still fetch the data, but such entries will be **highlighted in red** based on similarities in **Employee ID, Employee Name, Date of Payment and Total amount**. I have reviewed our previous data of 100+ reimbursements, and there has never been a case where all these details matched for two different reimbursements. Therefore, the chances of such duplication are very rare. However, even if such a case occurs, the entries will still remain visible in the sheet and will be highlighted in red for verification purposes.
3. This issue has now been resolved, as the data will be **stored in Drive**. Anyone with access to the sheet will be able to view the **bill images and reimbursement receipts** directly.
4. First need to share a msg to Employees as they need to submit reimbursement bills only within the same month in which the payment was made (Date of Payment). In case of a missed or exceptional situation, employees must first inform us and take permission from the reporting manager and 2nd manager via email. Before applying for the reimbursement in Zoho.

In cases where certain reimbursement entries are **skipped or forgotten by employees to apply**, such reimbursements can be **manually added under the One-Time Payment** column in the Final Employee Salary Sheet or we can change the date of payment from our end on zoho.

Compensation - Zoho

For Extra Compensation for an extra working day, the process will follow the same approach as reimbursement. The data will be automatically fetched from Zoho based on the **Date of working**, ensuring that it is within the same month selected in the **attendance record sheet**.

Problem:

1. Since the data is directly fetched from Zoho in raw format, it does not include any calculations. This created a challenge in determining the total amount for which that employee should be paid.
2. There is a possibility that an employee may apply for overtime compensation more than once for the same day, leading to duplicate entries.

Solution:

1. To address the calculation issue, an **additional column (Column S – Overtime Days)** has been introduced in the sheet. Each valid entry is **counted as 1**, which helps in calculating the total number of overtime days for each employee.
2. To prevent duplication, a validation logic has been applied:
 - If the Employee ID and Date of Working are the same for multiple entries, the system will consider only one entry and assign **0 to the duplicate**.
 - Additionally, conditional formatting has been implemented to highlight duplicate entries for better visibility and control.

Salary Sheet

This Sheet is used to fetch data from multiple sheets and perform all required calculations. Instead of applying calculations directly in the Final Salary Sheet, mainly data processing and calculations are carried out here and the finalised data is then reflected in the Final Salary Sheet.

- **Entities** - From Salary & PF Details Sheet
- **Employee ID, Employee Name** – Attendance record-Zoho (Based on Employee ID)
- **Expected Payable Days** – Calculated based on attendance records by considering the employee's Date of Joining and Last Working Day.
- **Present, Leave, OD, WFH** – Used to calculate the **Total Payable Days**. (All are formalised)
- **Total Payable Days** - This is the actual paid days in that particular month
- **Monthly Fixed Salary** – Fetched from the Salary & PF Details Sheet
- **Compensation Request** – Data is fetched from the Compensation sheet. The amount is automatically calculated based on the total number of days in a particular month.
- **Reimbursement** – Data is fetched from the Reimbursement Sheet. All reimbursements for the respective month are automatically added while avoiding duplicate entries based on Employee ID and Employee Name.
- **ESI/PF** – Data is fetched from the **Salary & PF Details sheet**. The deduction is automatically calculated proportionately based on the **total days** in the month and the employee's **Total Payable Days**.

Employees - Final Salary Sheet

Final Employee SS

In the Final Employee Salary Sheet, data will be fetched from the Salary Sheet only.

In every sheet, if I enter manual data for a particular month, it will be saved in the backend for that specific month. When the sheet is reopened, the data for the respective month will remain available and unchanged.

Employee Data – Fetched from the Salary sheet

- **Total Days (for the month, e.g., April)** – Represents the total number of days in the selected month
- **Total Payable Days** - Actual Payable Days for the month. Fetching from the salary sheet.
- **Monthly Fixed Amount** – Fetched from the Salary sheet Employee salary.
- **Salary Breakdown** – Structured as per the official salary Sheet format, as discussed with Vishal and Kapil sir.
 1. **Basic Pay** - 50% Basic monthly CTC (Based on the total payable Days))
 2. **HRA** - 50% of Basic Pay
 3. **Transport Allowance** - 1600 fixed (Based on the total payable Days)
 4. **Special Allowance** - It is a balancing figure {Col G+H+I - April Payable}

Other components include:

- **Compensation Request** – Fetched from the Salary sheet
- **Reimbursement Request** - Fetched from the Salary sheet
- **One-Time Payments** – Entered manually (for rewards like Employee of the Quarter, etc.)
- **Arrears** – Manual
- **Referral Bonus** – Manual
- **TDS** – Manual
- **ESI/PF** - Fetched from the Salary sheet
- **Advance Salary / Other Deductions** – Manual entry
- **Net Payable** – Manual entry - Calculated after considering all earnings and deductions
- **Status** – To track the payment status
- **Remarks** – For any additional notes or comments

Intern Data Fetching From Google Sheets

Attendance record - Intern

This Sheet will fetch intern attendance data from the Intern Attendance sheet.

For any updates or corrections, changes will need to be made directly in the original Attendance sheet. Since the Attendance Sheet URL needs to be updated every month, it is not feasible to maintain both complete automation and manual calculations within this sheet simultaneously.

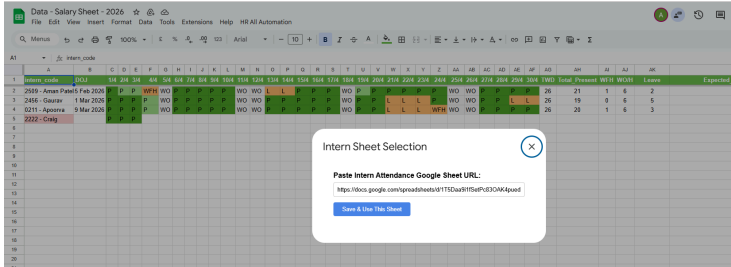

WO/H, Leave, and Expected Payable Days will be managed through the original sheet only.

Problems Identified:

1. A separate attendance sheet is maintained for every month, similar to Zoho. Since the source sheet changes monthly, direct data fetching becomes difficult.

- As interns do not have Employee Codes, it is not possible to automatically sort newly added interns below existing records in a structured manner.

Solutions Implemented:

- Added an option to enter the Attendance Sheet URL for the required month.
- So in this sheet, we added the date of joining from the Interns Data sheet and sorted the records accordingly to maintain proper sequence.

Interns Data

Intern data will be automatically fetched from the **Intern Details sheet**, which is maintained manually and contains records of all interns, including those who have resigned or been converted to full-time employees. The records will be sorted based on the Date of joining to maintain proper sequence and consistency.

Problem:

Since the Intern Details sheet contains data for all interns, including converted full-time employees, there is a possibility of irrelevant records being fetched for a particular attendance month.

Solution:

To resolve this issue, the system will fetch data only when the attendance month falls between the intern's Date of Joining and Date of Ending. The system verifies the attendance month from the Attendance Record sheet and then fetches only the relevant intern data accordingly.

Final Intern

In the Final Intern Stipend Sheet, the data will be organised and processed as follows:

- Entity, Name, Designation, DOJ, Intern Code and Monthly Fixed will be fetched automatically from the **Intern Data sheet**.
- Total Days** refers to the **total days in that particular month**, which will be calculated for the respective month based on the Attendance record Data.
- Total Payable Days** will be fetched from the Intern Attendance Record then it will deduct unpaid leaves. This is the Actual days for which an employee will get paid.
- Paid Leaves** data will also be fetched from the **Attendance Record** the final value may vary **based on** the number of **unpaid leaves**.

- **WFH** details will be fetched from the Attendance Record.
- **Unpaid Leaves** This will be maintained manually. However, once a value is entered here, the same number of days will be automatically deducted from the total payable days.
- One-Time Payments, Deductions and Remarks will also be maintained manually.
- **Net Payable** - Backend formalised.

This setup ensures that the data remains structured, easy to track and flexible for any required manual adjustments.
